My basic philosophy of science

I strongly believe that chemistry can give us the basic understanding of our daily life and will secure our sustainable doing for the benefit of future generations. Interdisciplinary work beyond only chemistry is essential for successful chemistry.

Polymers solve problems and do not create problems. Polymers have to be reused and polymer waste has to be handled properly.

New polymer properties can be generated by the combination of synthesis and chemical- as well as physical-processing. Biobased polymers are an important basis for sustainable materials. Never should bio-based polymers compete with food resources.

Scientific results should be, wherever possible, translated to real world applications. All my understanding is reflected by my research and teaching.

Present major responsibilities
Chair of Macromolecular Chemistry II
at the University of Bayreuth (UBT)

Business Unit Future Solution in
New Materials Bayreuth GmbH (NMB)

<https://www.nmbgmbh.de/>

Supreme review panel of Deutsche Forschungsgemeinschaft (DFG) for Polymer Materials

Coordinator for Master Polymer Science and
Ph. D. program Polymer Science at UBT

Major areas of research:

- Sustainable polymer materials
- Ultralight weight porous polymers
- Bionic design of polymer materials
- Electrospinning of polymer nonwovens,
- Speciality polymer coatings
- Conductive polymer composites
- Polymer-nanoparticle composites
- Microplastics pollution – mechanisms
